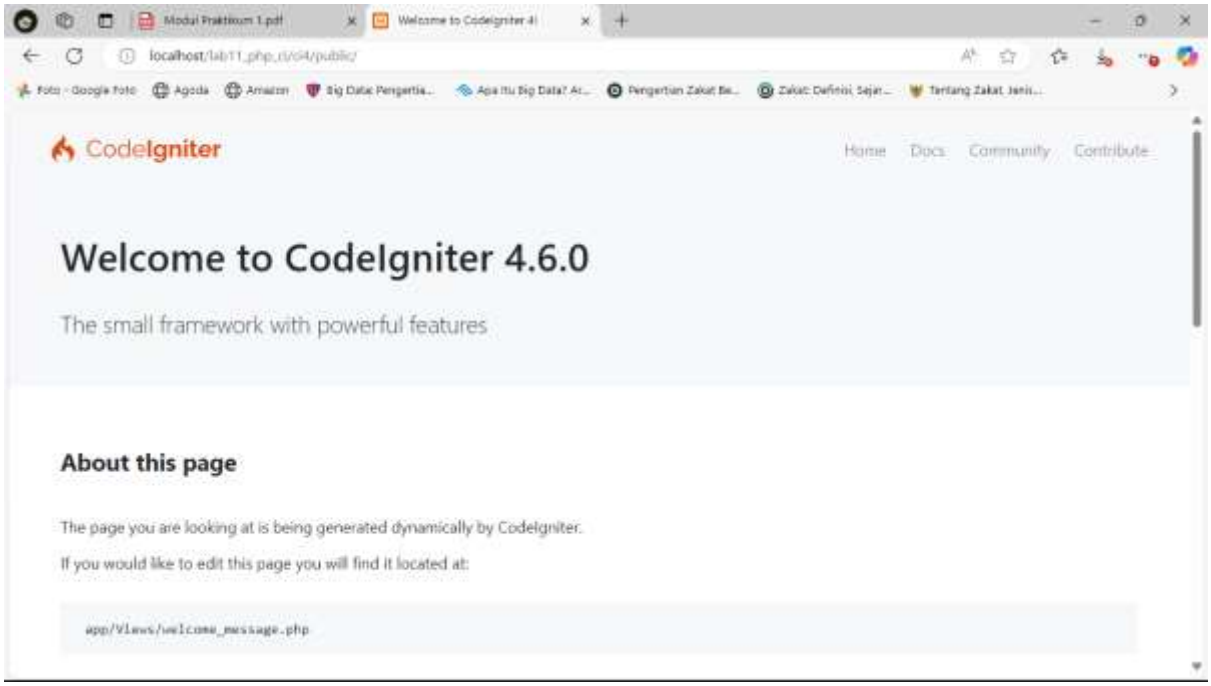
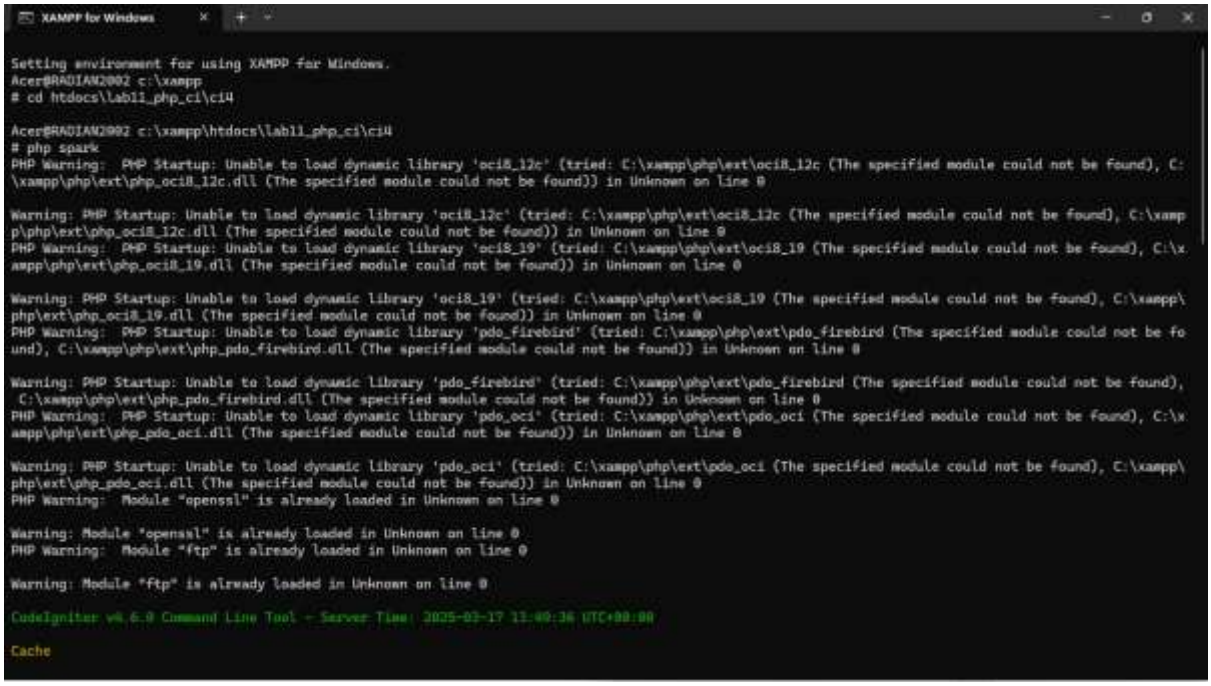
Tugas Pemrograman Web 2

Nama : Dian Fitriani

Kelas : TI23C2

Nim : 312310090





```
XAMPP for Windows

Cache
  cache:clear       Clears the current system caches.
  cache:info        Shows file cache information in the
                    current system.

CodeIgniter
  config:check      Check your Config values.
  env               Retrieves the current environment, or
                    set a new one.
  filter:check      Check filters for a route.
  help              Displays basic usage information.
  list              Lists the available commands.
  namespaces        Verifies your namespaces are setup
                    correctly.
  optimize          Optimize for production.
  phpini:check      Check your php.ini values in production
                    environment.
  publish           Discovers and executes all predefined
                    Publisher classes.
  routes            Displays all routes.
  serve             Launches the CodeIgniter
                    PHP-Development Server.

Database
  db:create         Create a new database schema.
  db:seed           Runs the specified seeder to populate
                    known data into the database.
  db:table          Retrieves information on the selected
                    table.
  migrate           Locates and runs all new migrations
                    against the database.
  migrate:refresh   Does a rollback followed by a latest to
                    refresh the current state of the
                    database.
  migrate:rollback  Runs the "down" method for all
                    migrations in the last batch.
  migrate:status    Displays a list of all migrations and
```

```
XAMPP for Windows

  migrate:status    Displays a list of all migrations and
                    whether they've been run or not.

Encryption
  key:generate      Generates a new encryption key and
                    writes it in an '.env' file.

Generators
  make:cell         Generates a new Controlled Cell file
                    and its view.
  make:command      Generates a new spark command.
  make:config       Generates a new config file.
  make:controller   Generates a new controller file.
  make:entity       Generates a new entity file.
  make:filter       Generates a new filter file.
  make:migration    Generates a new migration file.
  make:model        Generates a new model file.
  make:scaffold     Generates a complete set of scaffold
                    files.
  make:seeder       Generates a new seeder file.
  make:test         Generates a new test file.
  make:validation   Generates a new validation file.

Housekeeping
  debugbar:clear    Clears all debugbar JSON files.
  logs:clear        Clears all log files.

Translation
  lang:find         Find and save available phrases to
                    translate.
  lang:sync         Synchronize translation files from one
                    language to another.
